

Supreme Court of India

Sirpur Paper Mills Ltd vs The Collector Of Central Excise, ... on 11 December, 1997

Author: Sen

Bench: Suhas C. Sen, K.T. Thomas

PETITIONER:

SIRPUR PAPER MILLS LTD.

Vs.

RESPONDENT:

THE COLLECTOR OF CENTRAL EXCISE, HYDERABAD

DATE OF JUDGMENT: 11/12/1997

BENCH:

SUHAS C. SEN, K.T. THOMAS

ACT:

HEADNOTE:

JUDGMENT:

J U D G M E N T SEN,J.

The dispute in this case is about the leviability of excise duty on paper making machine which was erected by the appellant-company by using duty paid components purchased from the market and also by fabricating certain parts of the machinery in their factory. The duty paid components purchased from the market worked out to about 90% of the parts required for the machine. In respect of the parts fabricated inside the factory of the appellant, no duty was leviable under Notification No. 118/75 dated April 30, 1975 issued by the Government. The case of the appellant is that the excise authority erroneously imposed duty on the paper making machine installed in the factory of the appellant because the Central Excise Act imposes a duty on "all excisable goods produced or manufactured in India". It is well - settled that the "goods" contemplated by Section 3 which is the charging section of the Act must be movable and marketable. The case of the appellant is that the various components of the paper making machine purchased by the appellant had to be put together at the site where the machine was erected and embedded in the ground. Certain components were also to be fabricated at site. This machine was really immovable property and did not come within mischief of the charging section of the Central Excise Act.

Mr. Jaideep Gupta, appearing on behalf of the appellant, has contended that the machine was

permanently attached to the ground. In fact the machine cannot be worked until and unless the same was attached to the earth as a permanent fixture. It was further argued that the machine cannot ordinarily be sold in the market. The nature of the machine is such that it cannot be transferred offered for sale to any other party. An argument was also advanced that the machine was erected on turn key basis at the very place where the machine was ultimately embedded in a concrete base to make it a permanent fixture.

The Tribunal, however, rejected these contentions advanced before it on the basis of some findings of fact. The Tribunal held that the machine was attached to earth for operational efficiency. The whole purpose behind attaching the machine to a concrete base was to prevent wobbling of the machine and to secure maximum operational efficiency and also for safety. The Tribunal further held that the paper making was saleable and observed "if somebody to purchase, the whole machinery could be dismantled and sold to him in parts".

In view of this finding of fact, it is not possible to hold that the machinery assembled and erected by the appellant at its factory site was immovable property as something attached to earth like a building or a tree. The tribunal has pointed out that it was for the operational efficiency of the machine that it was attached to earth. If the appellant wanted to sell the paper making machine it could always remove it from its base and sell it.

Apart from this finding of fact made by the Tribunal, the point advanced on behalf of the appellant, that whatever is embedded in earth must be treated as immovable property is basically not sound. For example, a factory owner or a house-holder may purchase a water pump and fix it on a cement base for operational efficiency and also for security. That will not make the water pump an item of immovable property. Some of the component of water pump may even be assembled on site. That too will not make any difference to the principle. The test is whether the paper making machine can be sold in the market. The Tribunal has found as a fact that it can be sold. In view of that finding, we are unable to uphold the contention of the appellant that the machine must be treated as a part of the immovable property of the company. Just because a plant and machinery are fixed in the earth for better functioning, it does not automatically become an immovable property.

A further argument was made that the entire machinery as it is cannot be bought and sold because the machinery will have to be dismantled before being sold. The Tribunal has pointed out that the appellant had himself bought several items and completed the machinery. It had purchased a large number of components and fabricated a few and manufactured the paper making machine at site. If it is sold it has to be dismantled and reassembled at another site. We do not find any fault with the reasoning of the Tribunal on this aspect of the matter.

Lastly, it was contended that the paper making machine was not really manufactured by the appellant. Various components and parts were purchased and a few of the parts were fabricated at the factory and the assessee ultimately assembled various parts of the machine. We are unable to uphold this argument also because it has to be seen whether a final product is something distinct and apart from the components that have gone into its production. What the appellant has erected in its factory is a paper making machine. It may have purchased various components to make the

machine but nonetheless what has been produced is something quite different from the components that had been purchased. A new marketable commodity has emerged as a result of the manufacturing activity of the appellant.

Marketability being a question of fact, we are of the view there is no scope for interference with the order passed by the Tribunal. It cannot be said that the Tribunal has overlooked any material fact or its decision is perverse.

The appeal fails and is dismissed. No order as to costs.
